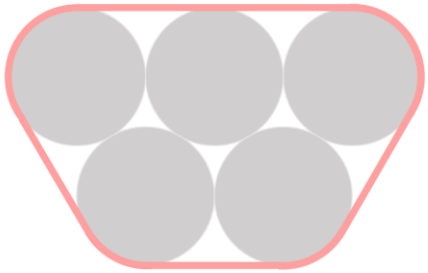
2021/10/1 Update

1. **How do you count the number of ping-pong balls placed on the cauldron (beverage can)?**
   In the red frame area shown in the figure below, the ping-pong ball that is in contact with the beverage can or that is in contact with the ping-pong ball that is in contact with the beverage can is judged to be the ping-pong ball placed on the beverage can. However, only when the entire ping-pong ball is within the red frame, it will be counted.



Area "on the beverage can" (inside the red frame)

2. **Is it judged that a ping-pong ball is placed on the beverage can even when a robot is in contact with the ping-pong ball or the beverage can?**
   Even if the robot is stopped in contact with the ping-pong ball or the cauldron, it will be counted.
